

Basic Inject Provides Benefits While Minimizing Cost

The **Precision Fertigation** Basic Inject is an entry-level system that allows you to chemigate your landscape using your existing irrigation system. Reliable and economical, the Basic Inject will help you better manage your chemical resources.

Features include:

- Compatibility with any existing landscape irrigation system
- Entry-level price and high quality make Chemigation system affordable yet reliable
- Low-volume injection rates
- Chemically resistant wetted parts
- Fewer moving parts in hydraulically balanced diaphragm pump mean less maintenance than pack-plunger-type pumps
- Simple manual-rate adjustment with micrometer dial while system is either running or stopped
- Unique suction-and-discharge valves can be replaced without disturbing piping, meaning less downtime and lower maintenance costs
- Internal relief valve protects pump motor

Specifications:

Electrical

120V: 60Hz, 240 spm, 1.2 amp (full load)

Materials

Diaphragm: Teflon®

O-ring: Viton

Wetted metal parts: 316SS
